Disinfection and Foam Trolley

Disinfection Trolley

The Disinfection and Foam Trolley disinfects pens, loading ramps, silos and areas in food warehouses safely and quickly.

The disinfection solution is mixed inside the scaled 50 l or 200 l tank to ensure precise dosing.

A disinfection pump on the trolley ensures thorough mixing of the solution. The fine drop flat jet lance provides high output rates.

In brief:

- Cleaning and disinfection solutions can be easily applied and rinsed with the flat jet lance.
- Alzogur application with the Alzogur set, optional.

Additional feature Foam Trolley

Certain substances and disinfecting agents should be foamed up to increase efficiency. The Foam Trolley facilitates effective foaming and

supplies homogeneous foam that ensures long-lasting exposure time.

In brief:

- The integrated compressor supplies air that is added to the medium inside a special mixing chamber to generate long-lasting foam >> effective foam soaking or foam disinfection.
- Facilitates powerful rinsing with special rinsing lance.
- The oil-free compressor is low-maintenance and has a low noise level at 74 dB.

Disinfection mobile, fast and safe

Alzogur application

Application of Alzogur or other substances that are applied in coarse drop form is carried out with the help of the Alzogur set. The substance is taken directly from the Alzogur barrel and the trolley is filled up with water in front of the pen. The coarse drop sprinkler head cares for safe and fast application of the solution.

Wet disinfection

- Fast and safe.
- For example, output volume of 0.4 l/m² in one minute, as specified by DVG, to disinfect around 20 m² floor area in stables using a flat jet lance.

Easy and reliable mixing with scaled container

The Foam Trolley keeps and carries all lances clearly arranged and safe.
