Shaft Washer Flexi

Cleaning exhaust air shafts with high pressure

INNOVATION

The Shaft Washer Flexi cleans the entire exhaust air funnel from bottom to top and can be operated safely while the user is standing on the ground. The shaft washer needs to be connected to a high pressure cleaner and can be inserted into the shaft directly from below. The device consists of a high-pressure nozzle tip with flexible spacers and can be easily

inserted through the fan blades and flaps from below.

Water pressure and downwards directed nozzles ensure that the washer moves upwards independently. Water jets sprayed from the all around laterally mounted nozzles clean the funnel thoroughly and over the entire length.

In brief:

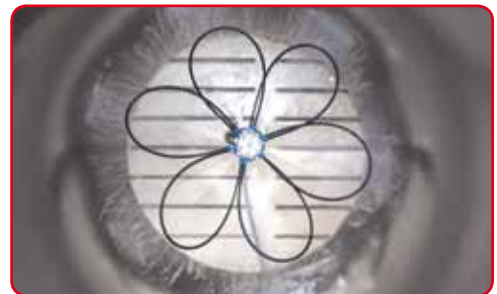

- Safe, user friendly operation.
- Hygienic advantages due to cleaning the entire funnel.
- Improved energy efficiency due to decreased flow resistance in clean shafts.
- Usable with any high pressure cleaner of 1000 l/h and above.

Flexible holders care for equal distance to the shaft's inner walls

Complete cleaning

Protected utility model
